

Engineering the world of the future

All meaningful progress depends on the ability to engineer innovative and lasting solutions. This has been true throughout history, and remains true today. Retter & Partner Ziviltechniker Ges.m.b.H. (Retter) built its reputation on its ability to deliver effective solutions to its customers, and is able to cover the gamut of engineering projects while tailoring initiatives to fit customers' needs.

The Retter management team, DI Philipp W. Retter, MSc; DI Sara Retter Galasso and Founder DI Werner Retter, is committed to developing deep relationships with its customers based on past experience and also future success.

Founded by Werner Retter in 1974 in the Austrian town of Krems on the Danube River, Retter has a strong local influence but has also been able to branch out internationally. What began as a traditional civil engineering firm has since grown to encompass building physics, climate engineering, and technical environmental planning. "It's through the combination of our collective expertise," says Mrs. Retter Galasso, "that we have been able to grow the scope and breadth of what Retter can offer." Retter now covers tailored projects for clients ranging from bridge planning to traffic planning, environmental planning, hydraulic

engineering, fire protection, and building physics. The total scope of a project or initiative may include local construction supervision, structural design and customer consultation at the project site. Clients are both public and private sector and the scale of what Retter is able to accommodate is flexible enough to extend across industries and sectors. This adaptability is the result of a versatile and committed team. "We put a lot of consideration into deciding who we bring on to our team," says Mrs. Retter Galasso. "We spend significant time ensuring that our employees are not only bringing, but also receiving the further education they need

in-house for all of our customers to realize their potential." As time has gone on, Retter's goals have adapted as well. The main focus has changed and adapted to serve the changing needs of the times. As the needs of the many industries Retter serves are so diverse,

fortunate position to be well-known in the regions in which it operates. Still, it maintains the position and opinion that a company's mission should be spread to the outside world. This includes growing projects both within its native regions as well as internationally. A dynam-

Our strength lies in diversity, and our ability to offer the full range of engineering services with the personal touch of our dedicated and competent team.

it is vital that it also remain adaptable and ready to change. For Retter, this means creating unique characteristics of competitive advantage by optimizing processes both internally and for externally facing roles. Enhancing these optimizations is an extensive network of contacts and authorities within different industry sectors, as well as the fact that Retter remains a family business that attaches great importance to personal relationships. Emphasis on these aspects creates a culture of quality and reliability at Retter. "Deadlines are met," says Mrs. Retter Galasso. "but no corners are cut in the process. This ensures technical quality and allround completeness and exceeded expectations for customer projects." Retter is in the

ic management team has aided in furthering this development. Though generations have changed over the course of time, leadership and the teams that make up Retter still provide the solid basis which creates the firm's value to this day.
